

Turn your data challenge into your biggest advantage

Lokavant is a clinical trial intelligence company that captures emergent, actionable insights for Sponsors and CROs. Lokavant's core platform and analytical applications make the planning and executing of trials more accurate and efficient.

Lokavant's solutions are designed by trial teams to provide a single source of truth and real-time, predictive analytics for trial teams. Our platform has harmonized over 2000 trials, allowing hundreds of operators to take action months earlier than traditional methods.

Our Approach

Problem

Trials generate 3x more data from twice as many sources as 10 years ago, yet we haven't changed the way we manage them. The result: \$Ms in cost and months of delay.

Solution

Our Clinical Intelligence platform brings in data from all sources in real-time, harmonizes that data and uncovers predictive insights, using your trial data and data from 2000+ trials.

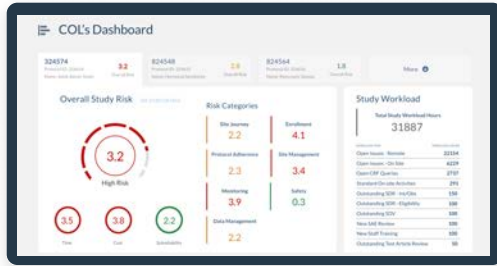

Value

“Lokavant was able to connect and harmonize operational data across hundreds of studies and uncover insights about our performance that we had never seen before.”

These insights have helped enable better time, cost, and quality outcomes.”

-Yoshihito Kondo
EVP Clinical Operations, CMIC

The most transparent, predictable, efficient planning and execution for the trials of today and the future. The result: Faster, lower cost, higher quality clinical research.

Oversight

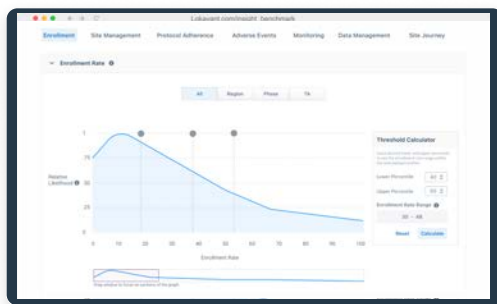

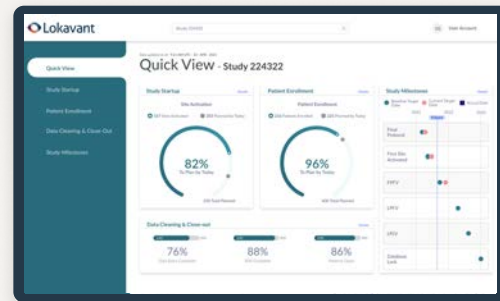

AI enabled RBQM to manage issues before they occur

- Go from portfolio- to patient-level views in just a few clicks
- Uncover issues before they happen with predictive risk scores
- Capture emergent trends with real-time KRI calculations

Milestone Tracking

Track your study with milestones that matter

- Accelerate startup by mitigating site-level bottlenecks
- Oversee study progress from startup to close-out
- Communicate seamlessly with research partners

Enrollment Forecasting

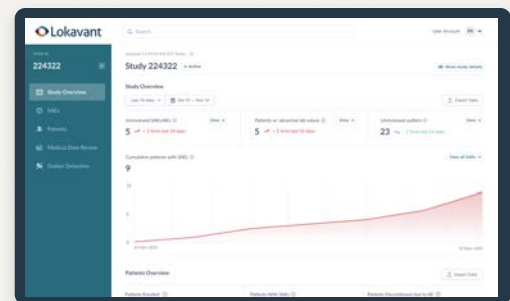

Accurate, efficient, real-time enrollment projections

- Improve accuracy by using our historical and your in-trial data
- Reforecast enrollment curve up to daily with no effort
- Predict and prevent enrollment delays before they happen

Medical Monitoring

Optimize patient safety and clinical data quality

- Capture a holistic view of each patient with smart profiles
- Identify quality issues with automated outlier detection
- Explore emergent trends in your safety/lab data in real-time

Insights With Impact Select Examples

IMPROVED QUALITY

>12 Patients

Saved from loss to follow-up (>\$1M in cost savings).

FASTER TIMELINES

>6 Months

Saved by unearthing site non-compliance issues.

MORE ACCURATE PLANNING

70x Improvement

in enrollment forecast accuracy.
